2018 Data Science Bowl

Find the nuclei in divergent images to advance medical discovery

Booz
Allen

Booz Allen Hamilton

Spot Nuclei. Speed Cures.

The challenge: Create an algorithm to automate nucleus detection

40%

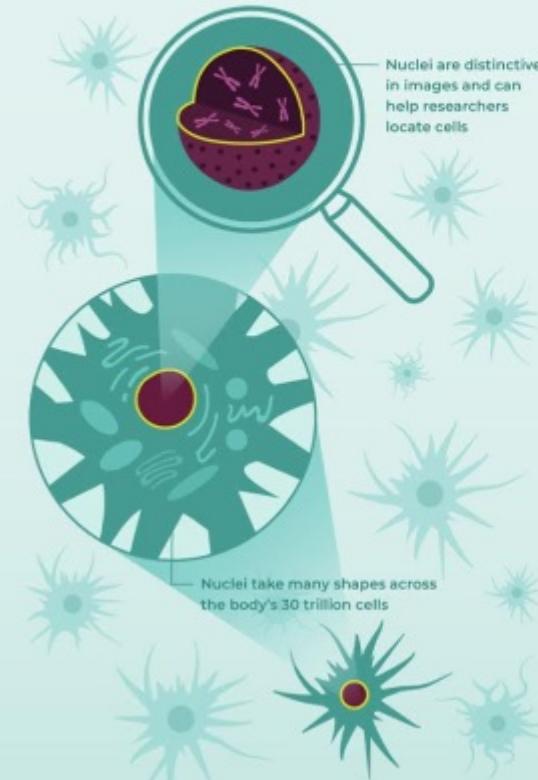

of all deaths are caused by illnesses like heart disease and cancer¹

75%

of rare diseases affect children²

30%

of affected children with rare diseases die before age 5²

Finding the nucleus helps to...

locate cells in varied conditions to enable faster cures

free biologists to focus on solutions

improve throughput for research and insight

reduce time-to-market for new drugs—currently 10 years

increase # of compounds for experiments

improve health and increase quality of life

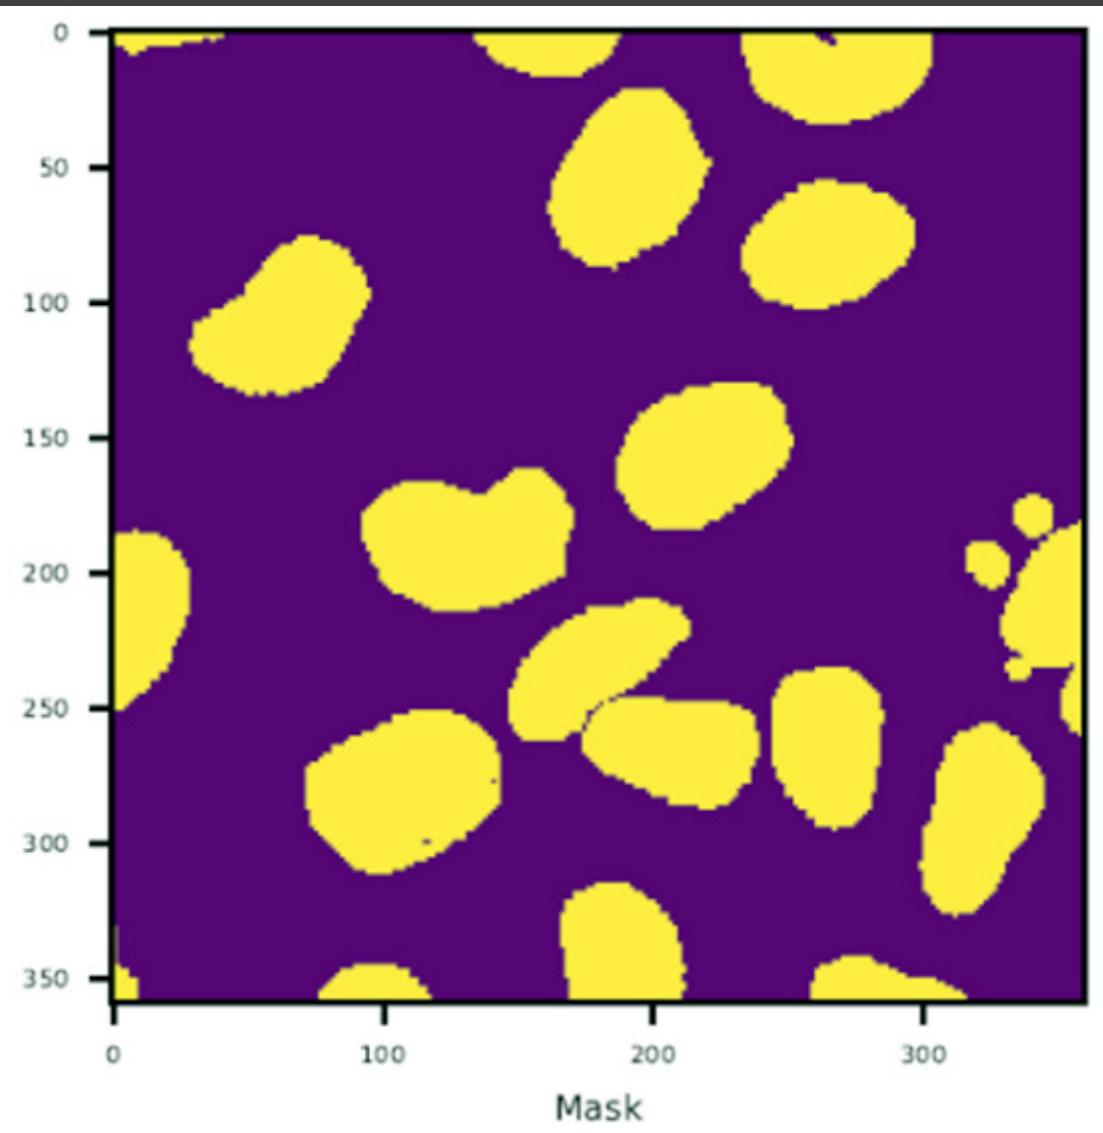

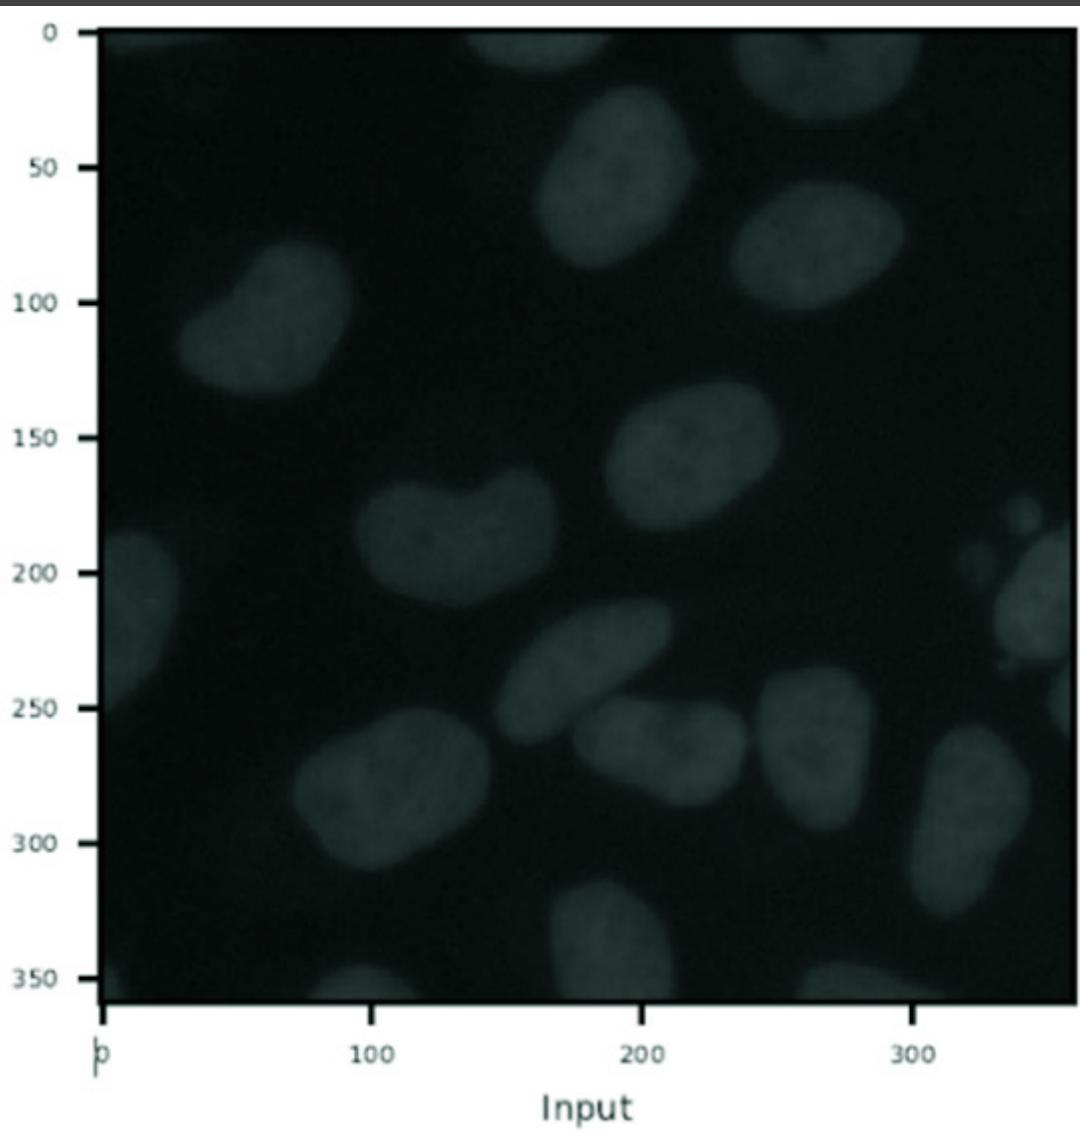

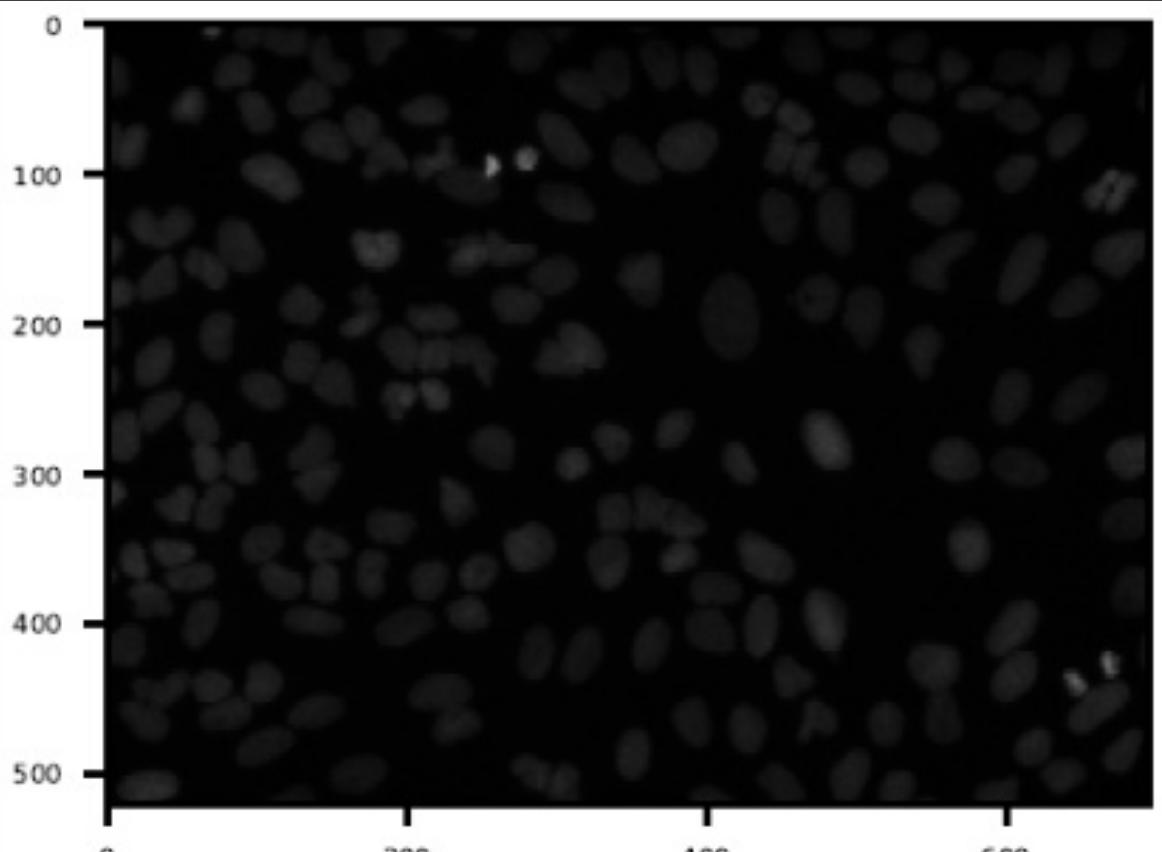

\$100,000

Prize Money

Comprensione del problema

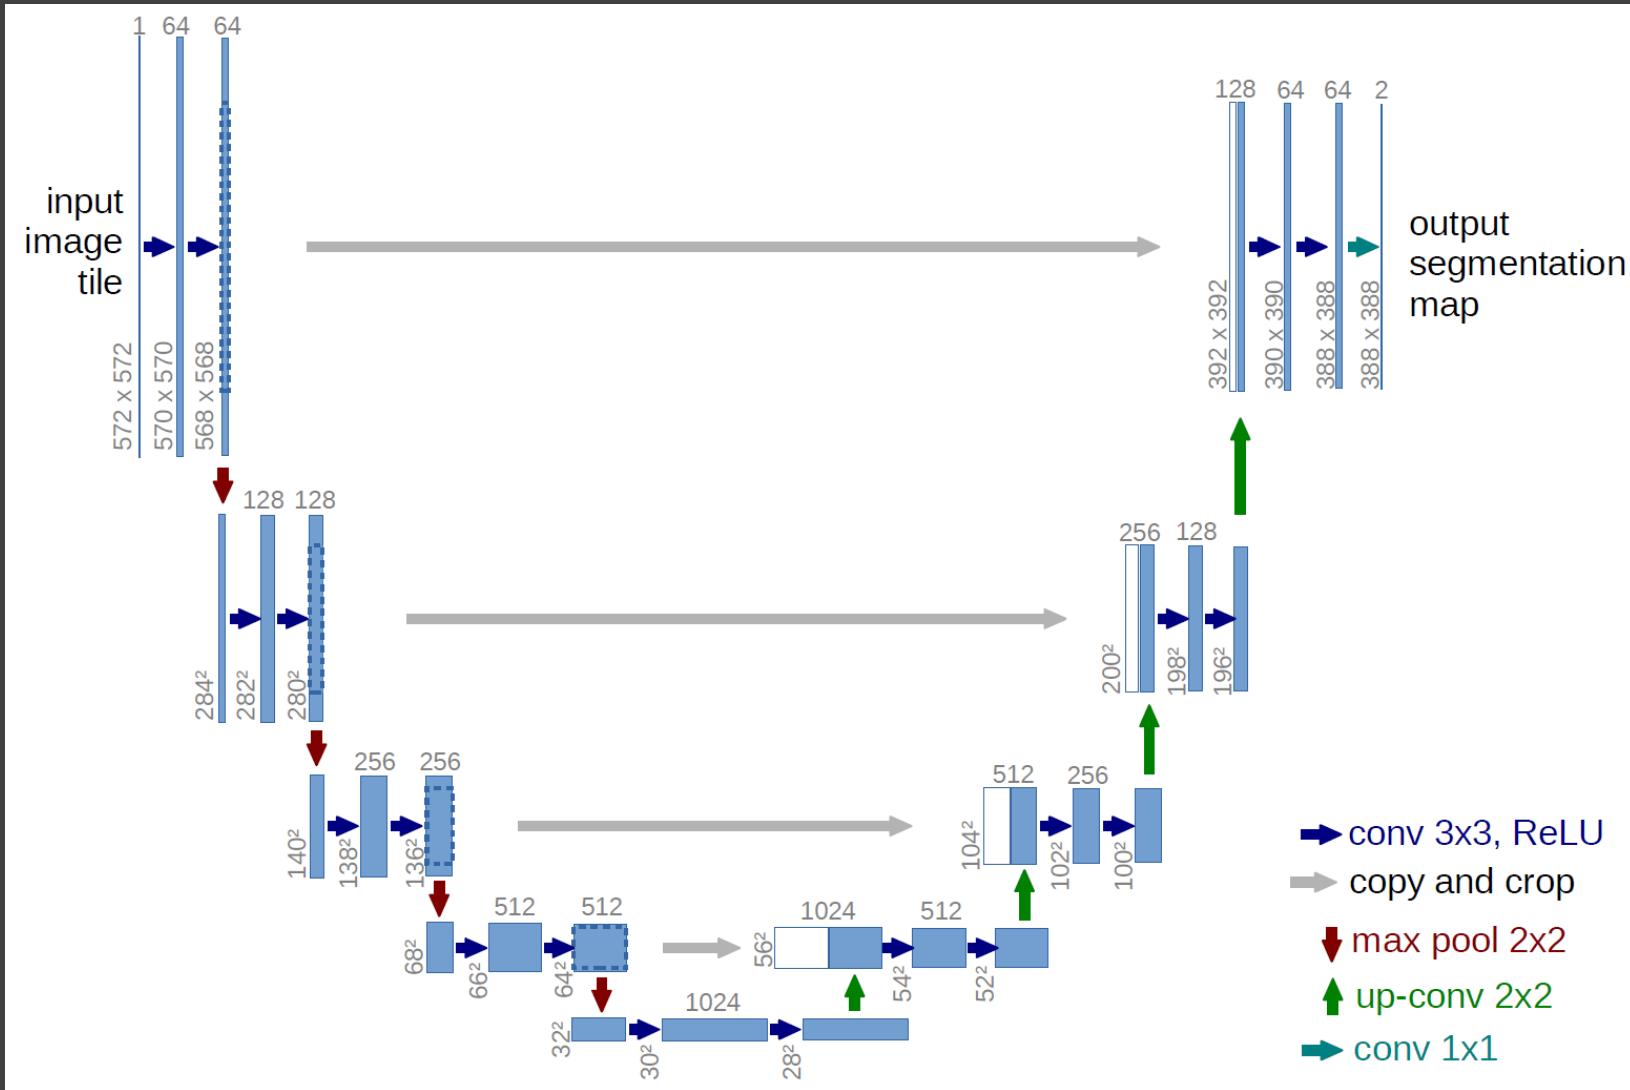

- Criterio di valutazione:
 - Intersection over Union (IoU)
 - Soglie (0.5 - 0.95)

$$\frac{1}{|thresholds|} \sum_t \frac{TP(t)}{TP(t) + FP(t) + FN(t)}$$

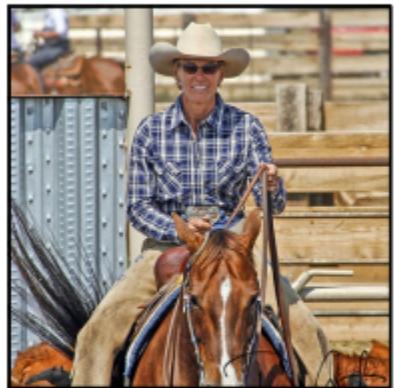

- Strategia di validazione

U-Net (2015) (<https://arxiv.org/abs/1505.04597>)

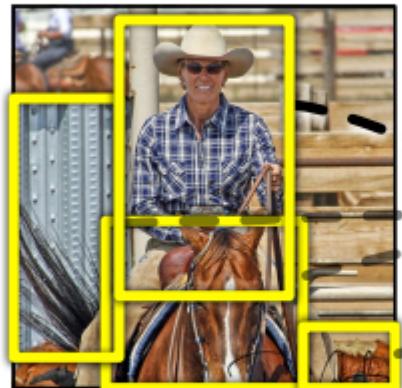

R-CNN (2014) (<https://arxiv.org/abs/1311.2524>)

R-CNN: *Regions with CNN features*

Mask R-CNN (2017) (<https://arxiv.org/abs/1703.06870>)

Induzione

FINE

A black and white photograph of a man from the chest up. He has dark hair and is wearing a dark suit jacket over a light-colored shirt. He is holding a large, rectangular sign with the word "FINE" printed on it in a bold, sans-serif font. The sign is held in front of his chest, partially obscuring his face. The background is a plain, light-colored wall.

FINE

A black and white photograph of a man from the chest up. He has dark hair and is wearing a dark suit jacket over a light-colored shirt. He is holding a large, light-colored rectangular sign with the word "FINE" printed on it in a bold, sans-serif font. The sign covers most of his face. The background is a plain, light-colored wall.
